Cornell University

The New York Times

The U.S. Department of Energy has awarded $99.6 million to Cornell University to support research projects in various fields, including renewable energy, climate change, and materials science. This funding is part of a broader $1.6 billion investment in 22 universities across the United States. The funds will support 122 projects, with Cornell receiving the second-largest share.

The award was announced by the Department of Energy, which is working to advance scientific research and technology development. The funding will help Cornell researchers in the Department of Energy's Office of Science, which supports basic research in the physical sciences.

The projects will cover a range of areas, including renewable energy, climate change, and materials science. Some of the projects aim to develop new technologies for renewable energy, such as solar and wind power. Others focus on understanding the impact of climate change and developing strategies to mitigate it. Still others are working on developing new materials for use in technology, such as batteries and electronic devices.

Cornell is one of the top universities in the world, with a strong focus on research and innovation. The university has a long history of leading in areas such as renewable energy and climate change, and this funding will help it continue to be a leader in these fields.

The funding is part of a broader trend of increased investment in scientific research and technology development. The Trump administration has proposed significant increases in funding for the Department of Energy, and Congress has also approved higher funding levels in recent years.

As a result, universities like Cornell are seeing increased support for their research efforts. This funding will allow Cornell researchers to continue to make important contributions to the world's understanding of science and technology.
$99.6/78 powers rebound for Cornell research projects

Stimulus at Cornell

Cornell is to be the world's Templeton Prize laureate, who will receive the most important award of 0.1% of the GDP or $99.6/78, to the University. Funds from the American Recovery and Reinvestment Act supporting more than 100 researchers at Cornell have resulted in a total of 34 research projects and 100 staff positions, and a resulting production of $4 billion in additional stimulus funds.

Projects that have received stimulus support range from research that is high priority to students who are likely to use this stimulus in their studies and research.

Science

Science money available for adults returning to school

The American Recovery and Reinvestment Act has provided $3 billion for research, science education, and education through technology in the form of stipends to students in need.

Total awards to Cornell students total more than $3 billion, and the university expects to receive an additional $1 billion in the next 12 months.

"We were thrilled to receive these awards, and we look forward to using this stimulus effectively," said an executive vice-president.

"Good Science"

Behavioral and social sciences were71% in the first year, and continued in the second year, with a total of 105 researchers and 200 staff positions, and a resulting production of $4 billion in additional stimulus funds.
